

LAUREL digital framework concept

Jorge Alfonso Kurano - UPM, Spain

iLTC technologies What we are looking for

- To know what works and what does not, we need to be able to evaluate the performance of systems, solutions, tools, technologies...
- Is it possible to carry out this evaluation on [systems, solutions, tools, technologies, ...] in isolation?
 - If the answer is YES. We can go through different existing assessment methodologies.
 - If the answer is NO or probably NOT, how can we put the context in the different [systems, solutions, tools, technologies, ...]?
- Let us try to make an exercise on a potential framework to support tech performance evaluation.

iLTC technologies An overall framework for iLTC

Main intervention areas

Information & Research	Service delivery	Leadership & Governance	Workforce	Financing	Technologies & Medical products
Policies to stimulate research in iLTC	Service availability & Access	Policy & Action plans on iLTC	Education and planning	Stimulating investments in innovative care models	Access to technologies and medical products
Data ownership and protection	Organisational & structural integration	 Performance-based management 	 Informal caregiver support 	Risk adjustment	 Shared information systems
Individual level data and risk prediction	Person-centeredSelf-management	Shared decision- making	Multi-disciplinary team	Coverage & reimbursement	E-health toolsEMRs

Individual iLTC user

Environment

• Each area can now be assessed according to its own main goals and objectives. Shall we link technologies and medical products to these area-specific objectives as well?

iLTC technologies Let us focus on technologies

Selected intervention areas supporting technologies

Technologies and medical products									
Information & Research	Service delivery	Leadership & Governance	Workforce (& users?)	Financing	Others				
 Clinical information systems Electronic Health Records Portals Interoperability 	 Self-management support Personal Health Records and access portals mHealth Telehealth Communication Engagement 	Policy & Action plans on iLTC	 eHealth education Health literacy / numeracy Training on iLTC tools Information and data filtering 	• ???	Artificial IntelligenceSupport to decision making				
	 Electronic information gathering tools Digital wayfinding through care spaces Interactive plans for medication management, behaviour change and procedural proparation 		Video and online patient education courses		 Augmented reality Telemonitoring Remote monitoring of vital signs Activity & Motion tracking Medication adherence tracking Decision tres and escalation algorithms 				

iLTC technologies Is there another dimension to consider?

- There are some ideas on how the care (iLTC) model could evolve from now.
 - Current F2F care model
 - Digital clinics and telemedicine
 - Telemonitoring
 - Facilitated self-care
 - Population health management

 We may want to keep track of the timeline when evaluating [systems, solutions, tools, technologies,...]
