**DEPARTMENT OF
CARE**

departementzorg.be

1. Integrated & goal-oriented

More people with **complex care and support needs**

Need for communication and **multidisciplinary consultation**

Integrated care

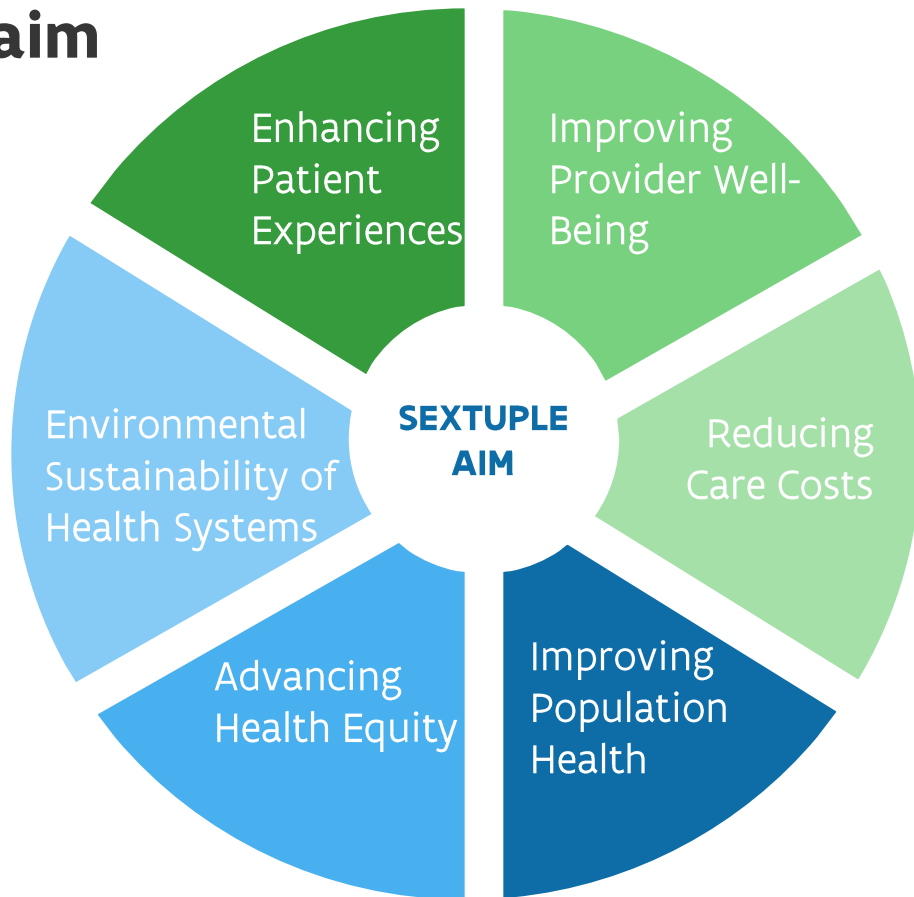

Care and support are aligned with each other and organized jointly so that the person with care and support needs experiences **one coherent and continuous care pathway**.

Goal-oriented care

From **disease- and problem-focused care** to care that starts from the person with a care and support need and what that person aims to achieve (cf. individual goals and tailored care).

2. Sextuple aim

3. Alivia

Alivia is the **digital collaboration platform for care and support planning**, in which the person with care needs takes the lead.

Alivia as a **tool*** for a digital care and support plan

A digital tool for people who need **(complex) care or support**

Care providers can create a **care plan together with the entire care team** (the person with care needs actively participates)

Setting **goals**, assigning **tasks**, and exchanging **information**

Transparent communication

* Tooling alone is not sufficient; adoption requires a supporting package of communication, training, and change management

4. Alivia – content
